

AMENDMENTS TO THE CLAIMS

This listing of claims below will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-42. (canceled)

43.(new) An apparatus comprising

a mattress having a periphery and an upwardly facing surface, and

a crib structure configured to support the mattress, the crib structure having a pair of spaced apart end units, each end unit having a top surface, the crib structure having a plurality of crib rail assemblies positioned about the periphery of the mattress and movable vertically relative to the mattress and relative to the end units, each of the crib rail assemblies having a top edge, the crib rail assemblies being movable to a position in which the top surfaces of the end units, the top edges of the crib rail assemblies, and the upwardly facing surface of the mattress are substantially coplanar.

44.(new) An apparatus comprising

a mattress having a periphery and an upwardly facing surface, and

a crib structure configured to support the mattress, the crib structure having a pair of spaced apart end units, each end unit having a top surface, the crib structure having a plurality of crib rail assemblies positioned about the periphery of the mattress and movable vertically relative to the mattress and relative to the end units, each of the crib rail assemblies having a top edge, the crib rail assemblies being movable to a position in which the top surfaces of the end units and the top edges of the crib rail assemblies are at or below the upwardly facing surface of the mattress.

45.(new) An apparatus comprising

a patient support surface having a periphery and an upwardly facing surface, and

a crib structure configured to support the patient support surface, the crib structure having a pair of spaced apart end units, each end unit having a top surface, the crib structure having a plurality of crib rail assemblies positioned about the periphery of the patient support surface and movable vertically relative to the patient support surface and relative to the end units, each of the crib rail assemblies having a top edge, the crib rail assemblies being movable to a position in which the top surfaces of the end units and the top edges of the crib rail assemblies are at or below the upwardly facing surface of the patient support surface.
